

# Vivitsu Maharaja

◆ vivitsu.maharaja@gmail.com ◆ (352) 278-5449 ◆ <https://github.com/vivitsu>

## EDUCATION

**Master of Science**, Electrical & Computer Engineering  
University of Florida, Gainesville, FL.

May 2014  
GPA: 3.33/4.0

**Bachelor of Engineering**, Electronics & Communication  
Dharmsinh Desai University, Nadiad, India.

May 2011  
GPA: 62/100

## EXPERIENCE

**Software Engineer**, LendingHome, San Francisco, CA

Feb 2015 - Present

- Designed & implemented a framework to write data pipelines using a task queue. The task queue is designed to facilitate asynchronous, concurrent scheduling of tasks, each of which is a pipeline interacting with a data source. Using this framework, we were able to improve performance of our existing pipelines by more than 100%.
- Implemented data pipelines which funnel all of the organization's internal & external data into our data warehouse, which powers all internal reporting and analytics.
- Implemented API integrations with third party vendors that allow the application to fetch bank statements & tax documents for authorized users which helped partially automate the loan application process.

**Senior Software Engineer**, Applied Intelligence, IO Data Centers, San Francisco, CA

Sep 2014 - Feb 2015

- Developed a data processing pipeline using **Apache Pig** to model the power profile of a datacenter using accumulated sensor data, as part of a larger effort to develop a data analytics platform using the **Apache Hadoop** ecosystem.
- Implemented a Pig **UDF (User-defined functions)** library in **Java** as part of a 2 person team to handle custom processing of input data including parsing, datetime handling and calculating statistics.

**Embedded Engineer**, Volansys Technologies, Ahmedabad, India

November 2011 - July 2012

- Developed & maintained a **USB 2.0 (EHCI)** driver, to allow clients on a LAN to boot using an USB to Ethernet adapter.
- Developed components to interface with the **PCI & BIOS** subsystems in order to manage the complete **state machine** of the host controller & maintain driver compatibility with adapters from multiple vendors.

## PROJECTS

**Distributed File System** using Java

August 2013 - December 2013

- Designed & implemented a distributed filesystem with a peer-to-peer architecture & chunk based object storage.
- Developed software daemons to detect & react to node failures (fault-tolerance) & ensure data consistency.
- Developed a multi-threaded client application to communicate with the cluster and store data on the filesystem.

**Performance Evaluation of Information Retrieval Systems** using Java

November 2013

- Benchmarked the indexing time, compression ratio, recall & indexing algorithm of an Apache Solr retrieval system.
- Designed a schema to perform spelling corrections and clustering of records using Lucene's Tokenizers & Analyzers.
- Developed an application in Java to automate the record indexing process.

**Distributed Fault-Tolerant Stock Exchange Server** using Java & JGroups

April 2013

- Implemented a stock exchange server that used fault-tolerant, virtually synchronous replicas to perform stock trades.
- Enhanced the system so that client information, trade requests & stock data are preserved across node failures.

Additional projects include **Gossip based Topology Management in Peer-to-Peer Systems** using C, **DNS Server** using Java RMI, **Totally-ordered Multicasting using Lamport's logical clocks** using Java, **Performance Evaluation of Open vSwitch & Linux Bridge**.

## SKILLS

- Programming Languages: Java, C, Python, Bash
- Experience with Apache Pig, Oozie, Flume, Hadoop, Redis, Riak, Solr, GNU Make, Apache Maven, Git & SVN.
- Knowledge of Data Structures & Algorithms, Embedded Systems, Virtual Networks.

## COURSEWORK

Computer Architecture, Probability & Random Processes, Computer Networks, Distributed Computing, Cloud Computing, Autonomic Computing, Information Retrieval (Guided Research), Virtual Computers.
